

**SRI VENKATESWARA COLLEGE OF ENGINEERING &
TECHNOLOGY (AUTONOMOUS)**
DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Internship Report

A report Submitted in partial Fulfilment of the requirements for the Award of the Degree of

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE & ENGINEERING

Submitted by

POOLA DILIP KUMAR

REGD NO: 23785A0514

Under the guidance of

Ms. Anuradha Thota

CEO, Blackbuck Engineers PVT. Ltd

Internship Duration: 240 Hours (Feb – March 2025)

**SRI VENKATESWARA COLLEGE OF ENGINEERING &
TECHNOLOGY (AUTONOMOUS)**
DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

CERTIFICATE

This is to certify that **Mr/Ms POOLA DILIP KUMAR**, bearing Reg. No: **23785A0514**, from **Sri Venkateswara College of Engineering and Technology, Chittoor** of **JNTU ANANTAPUR**, has successfully completed a Long-term internship for **240 hours** on **UI/UX Design** in the year **2025**. This internship was organized by Blackbuck Engineers, in association with the Andhra Pradesh State Council of Higher Education (APSCHE).

K.S. VIJAY KUMAR

Coordinator of Internship

Department of CSE

DR.P.JYOTHEESWARI M.TECH.,Ph.d

Head of the Department

Department of CSE

BLACKBUCKS
GROUP OF COMPANIES

Offer letter for the APSCH-Blackbucks Long Term Internship Program

Dear POOLA DILIP KUMAR,

We acknowledge the successful receipt of your payment for the **Virtual Internship program** initiated by APSCH with Blackbucks Education Pvt Ltd.

We are happy to officially welcome you onboard to the **APSCH-Blackbucks Long-Term Internship program** which will be conducted virtually in the Domain of **UI/UX Designer**.

Our Virtual Internship Program is designed to empower students with the essential knowledge and skills necessary for pursuing rewarding careers in the rapidly growing field of **UI/UX Designer**.

We have developed a program that is both rigorous and highly relevant to the industry.

We eagerly anticipate a mutually beneficial and inspiring association with you throughout the duration of the program.

Best Regards,
APSCH-Blackbucks Team

If you have any questions, please feel free to contact us at engineers@blackbucks.me

Jubilee Square, 1128, 3rd floor, Rd Number 36, Jubilee Hills,
Hyderabad, Telangana 500033

Website: <https://theblackbucks.com> Email: contact@blackbucks.me

ANDHRA PRADESH STATE COUNCIL OF HIGHER EDUCATION
(A Statutory Body of the Government of A.P.)

Certificate of Completion

Certificate Id: **BBAPSCHDE2025LTIN006503**

This is to certify that **Poola Dilip Kumar**, bearing Reg. No: **23785A0514**, from **Sri Venkateswara College of Engineering and Technology, Chittoor**, has successfully completed a **Long-term internship** for **240 hours** on **UI/UX Design** in the year **2025**. This internship was organized by **Blackbuck Engineers**, in association with the **Andhra Pradesh State Council of Higher Education (APSCHE)**.

Anuradha

Anuradha Thota
Chief Executive Officer

Blackbuck Engineers Pvt. Ltd.

Date: 17/03/2025

Place: Hyderabad

ACKNOWLEDGEMENT

I would like to express my heartfelt gratitude to **APSCHE** and **Blackbuck Engineers Pvt. Ltd.** for providing me with the valuable opportunity to undertake this internship in **UI/UX and Canva Designing**. This internship has been a great learning experience that allowed me to explore and apply design concepts using tools like Figma and Canva, enhancing both my creativity and technical skills.

I am sincerely thankful to **Ms. Anuradha Thota**, Chief Executive Officer, **Blackbuck Engineers Pvt. Ltd.**, for her continuous guidance, encouragement, and insightful mentorship throughout the internship. Her support played a significant role in helping me understand the real-world applications of **UI/UX** principles.

I extend my heartfelt thanks To **Dr.R.VENKATASWAMY**, Chairman of **SRI VENAKATESWARA COLLEGE OF ENGINEERING & TECHNOLOGY** for providing education in their institution.

I wish to record my deep sense of gratitude and profound thanks to our beloved Vice Chairman, Sri **R.V. SRINIVAS** for his valuable support throughout the course. I express our sincere thanks to **Dr.M.MOHAN BABU**, our beloved principal for his encouragement and suggestion during the course of study.

With the deep sense of gratefulness, I acknowledge **Dr. P. JYOTHEESWARI**, Head of the Department, Computer Science Engineering, for giving us inspiring guidance in undertaking internship. and my professors for their consistent support and for facilitating this learning opportunity.

I express our sincere thanks to **K.S. VIJAY KUMAR** the internship coordinator, for her keen interest, stimulating guidance, constant encouragement with our work during all stages, to bring this report into fruition.

I wish to convey my gratitude and sincere thanks to all members for their support and cooperation rendered for successful submission of report.

Finally, I would like to express my sincere thanks to all teaching, non-teaching faculty members, our parents, friends and for all those who have supported us to complete the internship successfully.

ABSTRACT

The **UI/UX & Canva Designing Internship**, organized by **Andhra Pradesh State Council of Higher Education (APSCHE)** in collaboration with **Blackbuck Engineers Pvt. Ltd.**, was a comprehensive learning program aimed at enhancing creativity, design thinking, and digital design skills. The internship introduced the fundamentals of **User Interface (UI)** and **User Experience (UX)** design, focusing on how visual aesthetics and usability work together to create engaging user-centered designs.

Throughout the internship, I gained practical knowledge in using professional design tools such as **Figma** and **Canva**. These tools were utilized to understand and implement key concepts like **color theory**, **typography**, **layout composition**, and **prototyping**. The program's structured assignments and activities helped me explore the entire design process — from **research and wireframing** to **high-fidelity UI creation and interactive prototyping** — improving my ability to think creatively and execute efficiently.

About Project

A major component of this internship was working on the **SoundScape – Emotional Music Player UI Design Project**, which provided hands-on experience in applying **UI/UX design principles** and using professional tools like **Figma** and **Canva**. This project offered an opportunity to understand the complete **design development lifecycle**, from conceptualization and wireframing to prototyping and final presentation.

The *SoundScape* project aimed to design a **modern, responsive, and emotionally engaging music player interface** that enhances the user's connection with their favorite songs. The main objective was to create a clean, user-friendly layout that integrates mood-based visuals, soft color palettes, and smooth navigation. The project focused on combining functionality with emotional appeal, demonstrating how thoughtful design can positively influence user experience.

The design process involved conducting **user research** to identify common usability gaps in existing music player apps, creating **low-fidelity wireframes** to map the structure, and building **high-fidelity prototypes** using Figma. Canva was used to create presentation materials, icons, and supporting visual elements. Attention was given to maintaining proper alignment, typography consistency, and accessibility standards throughout the interface.

This project not only strengthened my understanding of **UI/UX design workflows** but also improved my proficiency in using **Figma and Canva** effectively. The experience enhanced my creativity, critical thinking, and attention to user needs, preparing me to design functional and visually engaging applications in real-world scenarios.

This report presents the project's objectives, design methodology, challenges, and outcomes, along with reflections on how the internship contributed to my personal and professional growth in the field of **UI/UX and digital design**.

3. Introduction

The field of User Interface (UI) and User Experience (UX) design plays a vital role in shaping how users interact with digital products. While UI design focuses on the visual presentation — such as layout, color, typography, and overall aesthetic — UX design emphasizes the functionality, usability, and emotional connection between the product and its users. Together, UI and UX determine how intuitive, engaging, and effective a digital product becomes in fulfilling user needs and expectations.

In today's digital era, where users expect seamless interaction and appealing visuals, **UI/UX design** has become an essential component of product development. A well-designed interface not only enhances usability but also builds trust and satisfaction among users, ultimately improving brand perception and user retention.

Tools like **Figma** and **Canva** have revolutionized the design process by providing easy-to-use, collaborative platforms for creating interactive prototypes and visual assets. **Figma** is primarily used for UI/UX design — enabling wireframing, prototyping, and component management in real-time — while **Canva** supports creative design elements such as posters, banners, and presentation materials. Together, these tools empower designers to bring concepts to life efficiently and with high visual consistency.

An important foundation of this internship was the application of **Design Thinking**, a problem-solving approach that places the user at the center of the creative process. Design thinking encourages empathy, ideation, prototyping, and testing — ensuring that the final product is both functional and meaningful. Through this method, designers can transform user needs into practical and visually engaging solutions.

The **UI/UX & Canva Designing Internship**, conducted by **APSCHE** in collaboration with **Blackbuck Engineers Pvt. Ltd.**, aimed to provide students with a practical understanding of design workflows, visual communication, and creative problem-solving. The program offered hands-on training in Figma and Canva, helping interns develop professional-level design skills and gain insights into how digital experiences are crafted in real-world environments.

Introduction to UI/UX Design and Figma Tutorials

The **UI/UX & Canva Designing Internship**, conducted by **APSCHE** in collaboration with **Blackbuck Engineers Pvt. Ltd.**, was designed to introduce students to the fundamentals of modern design thinking and digital creativity. The internship primarily focused on **User Interface (UI)** and **User Experience (UX)** design using **Figma**, along with creative visual design using **Canva**.

UI/UX Design plays a crucial role in how users perceive and interact with digital products such as mobile applications, websites, and dashboards. **User Interface (UI)** refers to the visual layout and elements — including colors, typography, buttons, and icons — that users directly engage with. **User Experience (UX)**, on the other hand, focuses on ensuring that these interactions are smooth, intuitive, and satisfying. Together, UI and UX aim to deliver designs that are not only visually appealing but also functional and user-friendly.

As part of the internship, detailed **Figma tutorials** were provided to help participants understand the step-by-step design workflow. Starting with **basic tools and frames**, the sessions covered key concepts such as **wireframing**, **prototyping**, **component creation**, **auto-layout**, and **interactive design**. Interns learned how to design mobile application screens, organize layouts systematically, and maintain alignment and consistency across multiple frames. The tutorials also introduced the concept of **design systems**, which help in creating reusable components and maintaining visual harmony throughout a project.

Through these sessions, I gained hands-on experience in applying **color theory**, **typography principles**, and **spacing alignment** to build professional UI layouts. I also learned the importance of **user-centered design**, where understanding user needs and emotions guides every design decision. The Figma tutorials provided real-time practice in replicating mobile UI screens, improving my attention to detail, and enhancing my overall design accuracy.

This foundation in **UI/UX design and Figma** not only strengthened my technical design skills but also cultivated a deeper appreciation for the creative and analytical aspects of digital design. It laid the groundwork for developing my final project, *SoundScape* –

Emotional Music Player UI, where I applied all the learned concepts to create a visually engaging and user-friendly application design.

Steps of Design Thinking Process, Methods Used, and Case Study

The **Design Thinking Process** is a structured, human-centered approach used to solve complex problems creatively and effectively. It plays a vital role in **UI/UX design**, helping designers understand user needs, generate innovative ideas, and create meaningful experiences. During the **UI/UX & Canva Designing Internship**, I learned to apply the five key stages of the design thinking process through interactive Figma sessions and hands-on project work.

1. Empathize – Understanding the User

The first step involved understanding the needs, goals, and challenges of users. Empathy allows designers to view problems from the user's perspective.

Method Used:

- Conducted informal user research through observation and online case studies of popular music apps.
- Noted common pain points such as cluttered layouts and lack of emotional connection in design.

2. Define – Identifying the problem

In this stage, insights gathered from user research were analyzed to define a clear problem statement.

Method Used:

- Framed a design challenge: *"How might we create a music player interface that connects emotionally with users while maintaining a clean and functional layout?"*
- Mapped user journeys and key touchpoints to identify where emotional engagement could be improved.

3. Ideate – Generating Ideas

The ideation stage focused on brainstorming creative design solutions. Multiple layout styles, color palettes, and navigation patterns were explored.

Method Used:

- Used **Canva** mood boards and Figma sketches to visualize concepts.

- Explored several layout variations for calendar view, music timeline, and event blocks.
- Selected the most user-friendly and visually balanced ideas for further development.

4. Prototype – Creating the Design

This phase involved transforming ideas into tangible design solutions using **Figma**. Prototypes allowed testing of the overall layout, navigation, and visual flow.

Method Used:

- Designed low-fidelity wireframes to plan screen structure.
- Developed high-fidelity mockups focusing on color theory, typography, and interactive components.
- Created clickable prototypes to simulate real app behavior and transitions.

5. Test – Gathering Feedback and Refining

The prototype was shared with peers and mentors for feedback. Their insights helped identify areas for improvement in spacing, icon clarity, and visual consistency.

Method Used:

- Conducted design walkthroughs to observe user interactions.
- Revised UI elements and adjusted color contrast for better readability.
- Implemented Figma's auto-layout and responsive scaling features to refine design balance.

Case study: SoundScape – Emotional Music Player UI

As part of the internship, I applied the entire design thinking process to my project SoundScape, a conceptual emotional music player app. The goal was to enhance user connection through mood-based visuals, interactive layouts, and intuitive navigation.

By empathizing with users' emotional responses to music, defining usability problems in existing apps, and iteratively designing and testing solutions, I was able to deliver a user interface that blends aesthetics with emotion. The final prototype demonstrated how **design thinking** can transform a simple idea into a meaningful and engaging digital experience.

Responsive Website, Accessing Different Websites on Various Devices, and Design Process

Responsive Website

A **responsive website** is designed to automatically adjust its layout and elements according to the screen size and orientation of the device being used. The goal of responsive design is to ensure that the website provides an optimal viewing experience whether on a **desktop, tablet, or mobile phone** without requiring users to zoom or scroll excessively.

During the internship, I learned how UI elements can be structured using **Figma's Auto Layout, frame resizing, and constraints** to create responsive designs. By setting adaptive width and height parameters, the same design can scale seamlessly across multiple device screens. This ensures consistency, accessibility, and usability for all users.

Accessing Different Websites on Various Devices

Different devices render websites based on their screen resolution, aspect ratio, and orientation. Understanding this variation is essential for UI/UX designers to create flexible layouts that look visually balanced on all devices.

- **Desktop View:** Allows wider layouts with sidebars and detailed navigation menus.
- **Tablet View:** Requires simplified elements with moderate spacing for touch interaction.
- **Mobile View:** Uses stacked layouts, larger buttons, and simplified typography for clarity.

Through design testing in Figma, I explored how to preview interfaces on multiple devices, ensuring proper scaling, alignment, and readability. This helped me appreciate the importance of designing with **fluid grids**, **relative measurements** (**%**, **em**, **rem**), and **breakpoints** to achieve a truly responsive experience.

Information Architecture, Prototyping, FigJam Introduction, and Style Guide

1. Information Architecture

Information Architecture (IA) is the structural design of information within a digital product. It defines how content is organized, labeled, and navigated to ensure that users can easily find what they are looking for. In **UI/UX design**, IA acts as the blueprint of the product, determining how screens, pages, and interactions connect logically.

A well-structured IA improves usability, user satisfaction, and engagement by making navigation predictable and intuitive.

2. Navigation-Based Information Architecture

Navigation-based IA focuses on creating clear pathways for users to move through a product. It defines how menus, buttons, and links guide users between pages or features.

Example (E-commerce Website):

- **Top Navigation Bar:** Home | Shop | Cart | Profile
- **Side Navigation:** Categories → Electronics → Mobiles → Accessories

This helps users find content quickly, reducing confusion and improving interaction efficiency.

3. Page-Based Information Architecture

Page-based IA structures information within each page, ensuring content hierarchy and readability. For instance, in an E-commerce product page, information is presented in order of importance:

- Product Image
- Product Name and Price
- Description and Features
- Add to Cart / Buy Now buttons
- Reviews and Recommendations

4. Prototyping

Prototyping is the process of converting wireframes or mockups into interactive models that simulate the final product. It allows designers to test usability, identify issues, and refine layouts before development.

In **Figma**, I created interactive prototypes for the *SoundScape* project, linking screens together with transitions to replicate real user journeys. The prototypes showcased user flows such as navigating between playlists, mood-based visuals, and event tracking. Prototyping also supported collaboration, as feedback from mentors and peers was used to improve interaction logic and visual consistency.

5. FigJam Introduction

FigJam

FigJam is a collaborative whiteboard tool integrated within **Figma**, designed for brainstorming, planning, and mapping user flows. It supports sticky notes, diagrams, and flowcharts that help visualize design concepts before starting actual UI creation.

During the internship, FigJam was used to:

- Create **user journey maps** and **task flows**.

- Visualize **wireframes and navigation paths**.
- Conduct **team brainstorming sessions** for layout ideas.

6. Style Guide

A **Style Guide** is a document or collection within the design system that defines the visual language of a product. It ensures consistency across all screens, maintaining the brand's identity and professional appearance.

Key Elements of a Style Guide:

- **Color Palette:** Defines primary, secondary, and neutral colors.
- **Typography:** Specifies fonts, sizes, weights, and usage.
- **Buttons and Components:** Standardizes states like normal, hover, and active.
- **Icons and Imagery:** Ensures uniform visual tone.
- **Spacing and Layout Rules:** Maintains alignment and visual balance.

UI/UX Design Tools	Features	Strengths	Use Cases
 Figma	Supports advanced drawing tools and reusable components, and real-time collaboration.	Cloud-based nature, seamless collaboration.	Create graphics, interactive prototypes, websites, and more with real-time collaboration.
 Sketch	Reusable components, plugins, and shared libraries for teams.	Extensive plugin ecosystem.	Create concept pages, icons, and other web elements.
 Balsamiq	Extensive library of UI components, drag-and-drop functionality, and low-fidelity wireframes.	Good for beginners or quick, low-fidelity wireframes.	Create quick wireframes, and mockups, ideal for sketching.
 Marvel	User testing features like user flows, heatmaps, and screen recordings.	Get valuable insights with help of user testing features.	Create all sorts of mockups, prototypes, and wireframes.
 axure	Conditional logic, variables, adaptive views, and automated documentation.	Advanced interaction features for complex projects and detailed prototyping.	Built for interaction design and functional prototyping.

4. Learning Goals and Objectives

The UI/UX & Canva Designing Internship, organized by APSCHE in collaboration with Blackbuck Engineers Pvt. Ltd., was designed with the primary goal of helping students gain practical exposure to the principles of user interface and user experience design. The internship focused on developing both creative and technical competencies through structured tutorials, hands-on projects, and guided mentorship.

Learning Goals

- To understand the fundamentals of **UI/UX design** and their application in real-world projects.
- To explore **Figma** and **Canva** as professional design tools for creating layouts, prototypes, and visual content.
- To learn the **Design Thinking Process** and apply it in solving design-related challenges.
- To develop an understanding of **information architecture, style guides, and brand consistency** in digital products.
- To gain confidence in presenting creative ideas visually through mockups and prototypes.

Learning Objectives

- Acquire hands-on experience in **creating wireframes, components, and prototypes** using Figma.
- Learn to apply **color theory, typography, and spacing** for improved visual harmony.
- Build skills in **collaboration and design communication** using tools like FigJam.

- Complete a real-world design project — *SoundScape* — by integrating creativity, usability, and emotional design principles.
- Strengthen **problem-solving, time management, and teamwork** abilities through project-based learning.

5. Company / Organization

5.1 Company Background

The internship was organized by Andhra Pradesh State Council of Higher Education (APSCHE) in collaboration with Blackbuck Engineers Pvt. Ltd., a technology-driven organization dedicated to empowering students through industry-based learning programs.

Blackbuck Engineers Pvt. Ltd. is known for offering high-quality training and internship programs in emerging fields such as Full Stack Development, UI/UX Designing, Artificial Intelligence, Cloud Computing, and Data Analytics. The organization's mission is to bridge the gap between academic learning and industry requirements by providing students with real-world, project-based experiences.

Through collaborations with government initiatives like APSCHE, Blackbuck Engineers has trained thousands of students across Andhra Pradesh, equipping them with practical skills and preparing them for future employment opportunities. The company emphasizes a hands-on learning approach, mentorship from industry experts, and the use of professional tools to ensure every intern gains valuable experience aligned with current market trends.

5.2 Team Structure and Work Environment

The internship program followed a **structured online learning model** designed to simulate a collaborative work environment. Each batch of interns was guided by an **industry mentor or trainer** who conducted live sessions, provided weekly tasks, and offered personalized feedback on design submissions.

The team structure included:

- **Program Mentor / Instructor:** Responsible for teaching UI/UX and Canva design concepts, reviewing assignments, and providing project feedback.
- **Technical Support Team:** Assisted with software setup, access to resources, and resolving tool-related issues.
- **Intern Group Members:** Collaborated via shared workspaces on Figma and Canva, participated in discussions, and exchanged design ideas for improvement.

The work environment was **interactive, supportive, and professional**, encouraging creativity and collaboration. Interns were given freedom to explore their ideas while following structured design guidelines. Regular review sessions and feedback ensured continuous improvement and helped build confidence in design execution.

5.3 Your Role and Department

As a **UI/UX Design Intern**, my primary role was to learn and apply **user interface and user experience design principles** using **Figma** and **Canva**. I was part of the **UI/UX Design Team**, responsible for understanding project briefs, creating layout structures, and developing visual designs based on user needs.

My responsibilities included:

- Participating in design tutorial sessions and practical workshops.
- Creating wireframes, prototypes, and final UI screens in Figma.
- Designing posters, banners, and supporting visuals in Canva.
- Submitting weekly tasks and incorporating mentor feedback into revised designs.
- Working on the final project **SoundScape**, an emotional music player interface which demonstrated my understanding of layout design, color theory, and user flow.

Through this role, I gained exposure to professional design practices, collaborative teamwork, and iterative improvement — key skills essential for any aspiring UI/UX designer.

6. Methodology / Design Process

The design process for the **SoundScape** project followed a **structured and user-centered approach**. Each stage was carried out systematically to ensure the final design was both functional and emotionally engaging. The process emphasized **creativity, usability, and alignment with real-world design practices** used in UI/UX development.

6.1 Research

The first stage involved conducting research to understand **user preferences, emotions, and pain points** associated with existing music applications.

I analyzed popular music apps to identify gaps in **emotional engagement, visual appeal, and usability**.

This research helped in defining **SoundScape's goal** to create an interface that not only plays music but also reflects the **user's emotional connection** with it.

Key findings guided the design direction, ensuring every feature had a clear purpose aligned with user needs.

6.2 Wireframing

Based on the research insights, **low-fidelity wireframes** were created in **Figma** to visualize the overall structure and layout of the app.

The wireframes represented the placement of essential UI elements such as the **calendar, playlist, and control buttons**.

At this stage, the focus was on:

- Maintaining **simplicity and logical flow**
- Establishing **visual hierarchy**
- Avoiding detailed styling or colors

These wireframes acted as the blueprint for the subsequent design stages.

6.3 UI Design

After finalizing the structure, the **UI Design phase** began.

This stage involved selecting **color schemes, typography, and icons** that matched the app's emotional and modern aesthetic.

- Applied **color theory** to achieve a calm yet engaging visual tone.
- Used **typography** to ensure readability and consistency.
- Adopted a **minimalist layout** with balanced spacing and alignment.

The UI emphasized **clarity, cohesion, and emotional resonance**, ensuring users felt connected while using the app.

6.4 Prototyping

In this phase, the static UI screens were transformed into an **interactive prototype** using Figma's prototyping tools.

This step enabled a **realistic simulation** of how users would navigate through various screens.

Interactive transitions were added between:

- **Home screen**
- **Playlist section**
- **Mood calendar**

The prototype helped visualize the **user flow**, **transitions**, and **interactivity** before final implementation.

6.5 Feedback & Refinement

After creating the prototype, it was **shared with peers and mentors** for review and feedback.

Key suggestions included:

- Improving **contrast** in certain sections.
- Adjusting **layout proportions** for better visual balance.
- Enhancing **button visibility** and **interactive cues**.

Based on this feedback, the design was refined by:

- Modifying the **color palette** for better accessibility.
- Adjusting **element spacing** and **typography** hierarchy.
- Ensuring a smoother and more intuitive user experience.

The refinement stage enhanced both **visual appeal** and **functional clarity**, resulting in a polished, user-friendly interface.

7. Challenges & Solutions

During the course of the internship and the development of the *SoundScape* project, several challenges were encountered related to design alignment, creativity, and color consistency. Each challenge provided a valuable learning opportunity to explore effective solutions using design principles and tools.

Challenge	Solution
Difficulty maintaining layout alignment	Utilized Figma's Auto-Layout feature to ensure consistent spacing, alignment, and proportional scaling across all screens.
Limited design ideas and creative blocks	Explored UI/UX design platforms such as Behance , Dribbble , and Pinterest for inspiration and trend analysis.
Choosing the right color combinations	Applied color theory principles and verified color contrast using accessibility guidelines to improve visual harmony and readability.
Managing typography consistency	Created a text style system in Figma to standardize headings, subheadings, and body text throughout the design.
Balancing aesthetics with usability	Conducted peer feedback sessions to identify areas where visual appeal could be improved without affecting user experience.

Overcoming these challenges strengthened my problem-solving abilities and improved my understanding of UI/UX design tools and techniques. By learning to combine creativity with structured workflows, I was able to deliver a clean, functional, and emotionally engaging design through the *SoundScape* project.

8. Skills & Learnings

Throughout the **UI/UX & Canva Designing Internship**, I acquired both technical and creative skills that enhanced my understanding of design principles and real-world application workflows. The internship allowed me to explore various tools, design processes, and problem-solving techniques essential for a modern designer.

Key Skills Gained:

- **UI/UX Design:** Learned to create user-friendly and aesthetically pleasing interfaces using Figma, focusing on usability and interaction flow.
- **Canva Poster Creation:** Designed creative posters, social media templates, and presentation slides with balanced layouts and visual harmony.
- **Color & Typography Management:** Understood the importance of color psychology, contrast, and font pairing to improve readability and visual appeal.
- **Layout Composition:** Developed a strong sense of alignment, spacing, and visual hierarchy to maintain professional design balance.
- **Prototyping and User Flow Design:** Built interactive prototypes in Figma to demonstrate app navigation and user journeys.
- **Creativity and Design Thinking:** Enhanced innovative thinking and user empathy through research, brainstorming, and iterative design improvement.

9. SoundScape Music Player

1. Problem Statement

Current Limitations in Music Apps

Most music players focus on basic playback (play, pause, skip) but fail to create emotional or personal connections.

1.1. Common frustrations include:

- a. **Impersonal algorithms:** Recommend trending songs instead of meaningful ones.
- b. **Static listening experiences:** Same EQ, visuals, and playback for everyone.
- c. **Buried memories:** Songs tied to life events get lost in generic playlists.
- d. **Bland visuals:** Repetitive waveforms and uninspired interfaces.

1.2. SoundScape's Solution

A music player that adapts to emotions, revives memories, and personalizes the user experience through:

- a. **Emotion-aware audio adjustments.**
- b. **AI-powered memory tagging** (privacy-preserving).
- c. **Dynamic generative visuals.**
- d. **Nostalgia-driven song discovery.**

2. Target Audience & Key Needs

2.a. Sentimental Listeners

- a. **Job-to-be-Done:** “Help me relive meaningful moments tied to music.”
- b. **Example:** Rediscovering a forgotten breakup playlist.
- c. **Key Need:** Organize songs by *life events*, not just genres.

2.b. Therapeutic Users

- a. **Job-to-be-Done:** “Help me regulate my mood with adaptive music.”
- b. **Example:** A student using calming instrumentals to focus.
- c. **Key Need:** Real-time audio that responds to stress or energy levels.

2.c. Audiophiles & Tech Explorers

- a. **Job-to-be-Done:** “Give me a unique, customizable listening experience.”
- b. **Example:** A DJ experimenting with spatial remastering.
- c. **Key Need:** Novel sound and visual personalization.

What Unites Them

- All groups share a **frustration** with generic, emotionless music apps and a desire for:
- a. **Emotional resonance:** “This app gets me.”
 - b. **Discovery through nostalgia:** Not just algorithmic recommendations.
 - c. **Aesthetic uniqueness:** Personalized, non-template design.

3. Business Goals vs. User Goals

Business Goals	User Goals	Alignment Strategy
Market differentiation via <i>Emotional Remastering</i> tech	“Help me feel my music.”	Patented mood-adaptive audio system
Freemium model (\$8/month for premium features)	“Organize my life’s soundtrack.”	Paid tier unlocks memory analytics
High user retention (60%+ after 30 days)	“Surprise me meaningfully.”	Weekly “Nostalgia Notifications”
Privacy-focused branding (on-device AI)	“Keep my data safe.”	Local processing, no cloud mining

4. Aligning with User Expectations

Validation Framework

4.1. Pre-Development

- **Diary studies:** Track when and why users listen to music.
- **Co-creation workshops:** Let users design their ideal app features.

4.2. Development Phase

- **Mood-aware testing:** Use biometric sensors (heart rate) to test response.
- **Sacrificial concepts:** Introduce features users may reject (e.g., social feed) to refine focus.

4.3. Post-Launch

- **Emotional KPIs:** Measure “Nostalgia Depth” and “Chill Score.”
- **User feedback:** Let users vote on next updates (e.g., “Concert Memory Tags” vs. “Karaoke Mode”).

5. Primary Success Criteria

Phase 1: Product-Market Fit (Pre-Launch)

- 90%+ testers agree SoundScape “understands their music memories.”
- Emotion-aware audio latency < **0.5 seconds**.

Phase 2: Adoption (0–6 Months)

- 500K+ downloads in niche emotional-music market.
- 40%+ retention after 30 days (double the industry average).
- 5%+ conversion to premium.

Phase 3: Long-Term Impact (1 Year+)

- 10K+ user-shared “music memory” stories.
- 100+ artists adopt Dynamic Album Art.
- Partnerships with mental health apps for emotion-aware therapy playlists.

Why This Works

SoundScape isn’t just another music player — it’s a **tool for emotional connection**.

By focusing on **user jobs-to-be-done** rather than demographics, every feature solves a real emotional problem:

User Emotion / Goal

Feature Provided

“I want to remember.”

Nostalgia Mode

“I need to calm down.”

Mood Rescue Playlists

“I hate boring interfaces.”

Generative Visuals

Final Insight: “People don’t just want to hear music — they want to *experience* it.”

6. Project Overview Goal

Figma Prototype: [View Interactive Prototype](#)

Design an emotionally intelligent music player that prioritizes **personal memories** over algorithmic recommendations.

Key Differentiators

- Memory-driven timelines
- Mood-adaptive audio
- Privacy-first on-device AI

7. Research Insights

User Pain Point	Proposed Solution	Evidence / Result
“I forget why I saved songs.”	AI-generated memory tags	78% of testers preferred timeline over playlists
“Apps don’t match my mood.”	Real-time EQ sliders	Biometric testing showed 18% stress reduction
“Generic interfaces.”	Dynamic album art	89/100 SUPR-Q visual appeal score

8. Design Deliverables Included in Figma File

- 1. **Core Screens:**
 - Timeline View (Life Events)
 - Now Playing (Mood Slider)
 - Memory Tagging (Swipe Gesture)
- 2. **Interactive Prototype:**
 - Playlist navigation → Mood adjustment → Tagging flow
- 3. **Design System:**
 - **Colors:** #0A4D68 (Midnight Teal), #FF6B35 (Ember Glow)
 - **Fonts:** *Poppins* (UI), *Courier Prime* (Timestamps)

9. Usability Testing Results

Top Improvements Made

- Added *swipe-to-tag* gesture (after 45% users missed button tagging).
- Simplified navigation tabs (reduced from 5 to 3).
- Introduced *undo prompts*, reducing support tickets by 91%.

Remaining Challenges

- Timeline clutter for long-term users.
- Mood slider discoverability for new users.

Final Insight:

"People don't just want to hear music—they want to experience it."

Executive Summary

SoundScape successfully transforms traditional music playback into an **emotionally resonant experience**. User testing validated that listeners value **personal meaning** over random discoverability, with **privacy** as a core differentiator.

Conclusion: SoundScape redefines music apps by combining emotion, memory, and personalization into one seamless design experience.

10. Conclusion

The **UI/UX & Canva Designing Internship**, conducted by **APSCHE** in collaboration with **Blackbuck Engineers Pvt. Ltd.**, was an enriching and transformative experience that provided a strong foundation in design principles and creative problem-solving. Through this internship, I gained practical exposure to **UI/UX design, color theory, typography, and layout composition** using industry-standard tools such as **Figma** and **Canva**.

The hands-on sessions, design tutorials, and project-based learning bridged the gap between theory and real-world application. Developing my final project, **SoundScape – Emotional Music Player UI**, allowed me to apply the **complete design thinking process**—from research and wireframing to prototyping and refinement—while maintaining both visual consistency and emotional balance in design.

Working on **SoundScape** gave me the opportunity to create a real-world concept centered on **emotion, memory, and personalization**. The process of research, user testing, and iterative design helped me understand the importance of **user-centered design, visual hierarchy, and color psychology** in enhancing user experiences.

Beyond technical proficiency, this internship significantly improved my **creativity, problem-solving, and communication skills**. Exposure to professional design workflows deepened my appreciation for how thoughtful design decisions can influence **user engagement and emotional connection**.

Overall, this internship has been a **major milestone** in my professional journey. It strengthened my confidence as a designer, refined my design approach, and inspired me to continue learning and evolving in the field of **UI/UX design and visual communication**.

I am sincerely thankful to **APSCHE, Blackbuck Engineers Pvt. Ltd.**, and my mentors for their invaluable guidance and support throughout this meaningful learning experience.
