Professional Summar

Performance-driven Python Full Stack Developer specializing in Django, FastAPI, React, and relational database design. Proven track record of maintaining 99.8% uptime, reducing latency by 25%, and integrating 10,000+ data payloads. Expert in Python data modeling, object-oriented programming (OOP), asynchronous web routing, and PyTest automation.

Education

Bachelor of Technology, Computer Science and Engineering Sri Venkateswara College of Engineering & Technology, Chittoor	Graduated: 2026 CGPA: 7.6 / 10
Intermediate – (MPC) Narayana Junior College	2020 – 2022 76%

Skills

Languages & Core: Python, Java, JavaScript, OOP, Data Structures & Algorithms
Frontend & Frameworks: Django, Angular
Databases: MySQL, DBMS, Django ORM, Redis
Testing & QA: Manual Testing, Bug Reporting, Test Case Writing, Component Testing
Tools & Practices: Git, GitHub, CI/CD (GitHub Actions)

Experience

Python Developer Intern (Tansvi Technologies) <i>Food Ordering Platform – Remote (Agile Team)</i>	Jan 2026 – Apr 2026
- Developed 10+ responsive web interfaces integrated with secure, custom RESTful APIs, reducing cross-platform client data integration latencies by 25%. - Isolated and resolved 20+ critical production bugs via root cause analysis, increasing core platform uptime to 99.8% across active Agile sprint cycles. - Developed a full-stack order management system supporting 500+ parallel users and 1,000+ product records via optimized MySQL schemas and RESTful integrations.	
AI-Driven Order Orchestration Engine	
- Architected an asynchronous FastAPI data pipeline integrating LangChain and OpenAI models to automatically parse, classify, and fulfill 10,000+ custom client orders. - Implemented a Retrieval-Augmented Generation (RAG) system utilizing a Pinecone vector database to embed unstructured product specs, reducing semantic inventory query latencies by 35%. - Engineered a distributed Redis caching layer to manage active user chat sessions and stream real-time LLM token outputs securely to 500+ concurrent profiles.	

Projects

Patient Management System MongoDB, Express.js, Angular, Node.js (MEAN Stack)	Mar 2025 – Apr 2025
- Architected a secure full-stack application enforcing role-based access controls for 200+ authenticated users with zero-trust backend validation layers. - Structured a scalable MongoDB NoSQL data tier, optimizing query execution logic and indexing to eliminate data retrieval anomalies	
Travel Booking System Python, Django, React, JavaScript	Feb 2025 – Mar 2025
- Designed an ACID-compliant MySQL transactional database schema utilizing Django ORM to handle secure, concurrent booking workflows for 500+ active user profiles. - Built decoupled RESTful routing patterns incorporating robust session management guardrails to maintain data integrity and prevent cross-tenant data leakage	

Certifications

Python Programming – Scaler Academy (Advanced OOP Patterns, Core Algorithms, Structural Logic, Code Efficiency)
Python for Data Science – IBM (Data Pipelines, Exploratory Data Analysis, Pandas, Matplotlib, ML Workflows)
